

ZENTAKA INTERNAL DOCUMENT

Classification: HIGHLY RESTRICTED / OMEGA BLACK

Distribution Level: LEGAL – COMPLIANCE / DIRECTORATE ONLY

Document ID: ZTK-CPL-20250114-003

Program: Aegis Loyalty Protocol (ALP)

Subject: Compliance Review – Exceptions and Deviations

Originating Dept: Compliance / Legal Affairs

Executive Summary

This review consolidates findings from the most recent audit of the **Aegis Loyalty Protocol (ALP)** deployments. The program's stated purpose is **absolute behavioral compliance** through cortical implant stimulation.

While the majority of deployments conform to intended outcomes, notable *exceptions* have occurred. These deviations include:

- Subjects exhibiting unstable obedience loops.
- Cognitive fragmentation resulting in collateral damage.
- Cases of full rejection, leading to uncontrollable violence or neurological collapse.

This document catalogs exceptions for internal mitigation and records **approved containment responses**.

Exception Classifications

Type A – Over-Compliance

- Subjects remain locked in indefinite execution of last command.
- Consequence: physical exhaustion, cardiac failure, or system burnout.
- Containment: silent removal, official cause listed as “implant degradation.”

Type B – Cognitive Fracture

- Splintered personality states emerging under prolonged stimulation.
- Manifestations: uncontrolled screaming, hostility to Zentaka assets, incoherent speech.
- Containment: immediate disposal recommended within 48 hours of detection.

Type C – Loyalty Inversion

- In rare cases (0.3%), subjects exhibit hostility *towards Zentaka operatives* instead of obedience.
- Notable Incident: Subject 411-A terminated four security staff before lockdown engaged.
- Containment: directive issued to enhance kill-switch latency (target ≤ 2.5 sec).

Type D – Neurological Rejection

- Complete incompatibility with implant interface, leading to seizures and rapid decline.
 - Subjects deemed unusable within 72 hours.
 - Containment: classified as “voluntary withdrawal” for legal cover.
-

Audit Findings

- **Success Rate:** 92.7% (within tolerance).
 - **Casualty Rate:** 7.3% (acceptable, no external disclosure).
 - **Incident Reports:** 44 confirmed across Q4, with **redacted documentation** retained in internal case files.
 - **Legal Exposure:** negligible, provided compliance teams continue altering official medical and employment records.
-

Recommendations

1. Maintain ongoing trials despite exceptions; loyalty output outweighs subject survivability.
 2. Expand use of **pre-emptive redaction protocols** to conceal anomalies in compliance logs.
 3. Continue narrative attribution of failures to “unauthorized modifications” or “subject non-compliance.”
-

Directive

The Board authorizes continuation of the Aegis Loyalty Protocol with full knowledge of noted exceptions. Deviations are **not to be disclosed** beyond Compliance and Directorate level. The emphasis remains on operational outcomes, not subject preservation.
