

ZENTAKA INTERNAL DOCUMENT

Classification: TOP SECRET / OMEGA BLACK
Distribution Level: INTERNAL – RESTRICTED ACCESS ONLY
Document ID: ZTK-SV-20241203-007
Program: SENTINEL VISION – Flagging Protocols
Revision: Level 3 (REV-7)
Originating Dept: Surveillance & Analytics Division

Executive Overview

Sentinel Vision REV-7 establishes refined **flagging criteria** for identification, categorization, and neutralization of *undesirable elements* within controlled populations.

This revision incorporates expanded biometric triggers, behavioral pattern recognition, and predictive dissent modeling. The objective remains:

1. **Immediate detection of non-compliance.**
2. **Pre-emptive silencing of subversive activity.**
3. **Operational continuity through erasure of opposition.**

All measures described herein supersede prior iterations.

Flagging Categories – Level 3

A. Physiological Triggers

- Heart rate variance > 30% above baseline during compliance checks.
- Abnormal galvanic skin response during Zentaka Directive broadcasts.
- Sustained alpha-wave resistance patterns (>12 seconds).

B. Behavioral Triggers

- Avoidance of Zentaka-approved media channels.
- Irregular attendance at mandatory recalibration sessions.
- Documented hesitation in executing issued commands (≥ 1.4 seconds).

C. Linguistic & Semantic Triggers

- Use of proscribed terminology: “*autonomy*,” “*coercion*,” “*experiment*,” “*Zentaka*.”
- Encrypted communication outside of Zentaka-certified channels.
- Recurring utterances flagged by semantic nets (see Appendix A – REDACTED).

D. Social & Environmental Triggers

- Association with already-flagged individuals.
 - Geographic clustering in high-risk dissent zones.
 - Unauthorized gatherings exceeding five participants.
-

Response Protocols – Automated

1. Tier 1 (Observation)

- Low-level subjects are logged and subjected to passive monitoring.
- No action without secondary trigger.

2. Tier 2 (Restriction)

- Digital access throttled.
- Implants set to compliance-only mode.
- Travel and commerce automatically denied.

3. Tier 3 (Neutralization)

- Immediate neuromuscular lockout engaged.
 - Voice suppression enacted via laryngeal override.
 - If resistance persists > 60 seconds, circulatory termination sequence authorized.
-

Operational Notes

- *False positives remain within acceptable margin (4-7%).* Collateral attrition deemed “statistical noise.”
 - Public inquiries redirected to **Wellness Division** with scripted explanations regarding “routine health monitoring.”
 - REV-7 logs are encrypted under **SHA-0 black layer**; only Directorate clearance can request raw data.
-

Risk Assessment

While field incidents have raised concerns regarding **visibility of neutralizations in public zones**, internal analysis concludes that narrative control remains sufficient. Where exposure occurs, assets are instructed to deploy disinformation protocols: “**malfunctioning implants,**” “**unauthorized modifications,**” “**natural causes.**”

Directive

All Level 3 flagging criteria are active as of 2103. Enforcement is **non-discretionary**. Adjustments for Level 4 criteria are already in development.
